

Clavicle Injuries

LearnSportsMed

Learning Objectives

- Important clinical features to consider in differentiating clavicle injuries.
- Brief introduction to the anatomy of the clavicle and ACJ.
- Differentials to consider in a patient presenting with clavicular pain: focusing on clavicle fractures and acromioclavicular joint separation.
- Specific clinical tests that can be used to help determine the cause of clavicular pain.
- The Rockwood and Green classification of ACJ separation.
- Upper limb injuries to consider if the mechanism of injury is a fall on an outstretched hand (FOOSH).
